Make format change operations easier and faster on a shrinkwrapper machine complete with film, flap and tray, thanks to an innovative system of knobs and counters

CUSTOMER NEED:

The Busseto plant required the experience and expertise of BBM Service to speed up format change operations on bottling lines. Being a customer that often needs to make a change in bottle size and package conformation, it was of primary importance to be able to guarantee greater speed and flexibility in the process.

BBM SOLUTION:

BBM specialized technicians modified the bending fins and inserted a rotary cylinder to close the flaps without resorting to mechanical changes. In addition, an adjustable side assembly was mounted on the entrance. All of this, to facilitate the format change without using special tools, but only simple knobs with the reference of the meters, with which the operator can set the position of the various components. In addition, a passage plate has also been replaced.

On other occasions, BBM Service has dealt with similar operations on other machines in the line, such as labelers and cluster machines: with the right study, it is possible to carry out a simple intervention, which does not require more than a week of work, in order to save time and energy in each format change operation.
