

BUSINESS PRESENTATION

**AUTOMATIC
STACKER MACHINES**
DEVELOPED BY BBM

BY YOUR SIDE IN PACKAGING

Compact and flexible mechanical stacker machine, for stacking products with different size and dimensions such as boxes on multi layer pattern.

BBM automatic stacker machines stack products on the multilayer collation format required by means of a pneumatic lifting pusher, achieving the maximum output of 25 lifting cycles per minute.

They represent a cost-effective solution for optimizing and saving purposes in the packaging, storage, and palletizing processes, in several industrial segments, meeting customers' production process demands.

OPTIONAL

- Available versions linear and 90°IN-OUT product flow

Reduced dimension, compact frame and linear or angular layout make it easily addable in the existing line.

“USER-FRIENDLY” MAN-MACHINE INTERFACE

Process management is controlled by PLC, with a user-friendly interface that allows to set up, store, and recall the different application programs. Product flow manages by the Interface with the other machines allowing control of the entire handling process.

TECHNICAL FEATURES

Linear or angular version°

Infeed conveyor at an adjustable speed

Adjustable Workplan height

ADVANTAGES

Compact space-saving solution

Quick and easy format change

High quality components

Easy and low-cost maintenance
