

Fine Foods

Relocation and start-up: BBM revolutionizes the line of food supplements

CUSTOMER NEED:

Fine Foods had already partnered with BBM Service for maintenance and service. On this occasion, he was looking for a partner who would be able to guarantee the turnkey supply of an automatic line in a few weeks, for his plant in Zingonia, which specialized in the production of food supplements.

BBM SOLUTION:

BBM took care of the relocation of some machinery, including an unscrambler, a filler, a line checkweigher, a capper, a marker, a labeler, and a packaging machine. The machinery was moved to another area of the plant; then, they were reconnected through an innovative network of storage benches and conveyors of the latest generation, designed and supplied by the engineering department of BBM Service, in collaboration with the customer.

The installation by BBM specialized began on December 27, 2021; on January 17, the work had already ended with the testing phases. The result is an automatic line, capable of packaging up to 3000 jars per hour and designed to manage, through an operator panel, up to three different sizes of jars.
