

STELLA ROSA WINES

Supply of the packaging line with Pick & Place

CUSTOMER'S NEED:

The customer needed an automated packaging line for their new product. The line had to manage the packaging of different flavors autonomously.

BBM SOLUTION:

We developed an ad-hoc project with packaging and package handling systems. The customer started producing cans of wine flavored in different scents, that had to be packaged in multi-product packages in an automated way.

We provided the whole system, starting from accumulation banks, by which cans of different flavors converge in the wrap-around package forming machine, up to the packaging machine equipped with two change-formats (3x2 package and 4x2 package) and the pick & place system. A machine studied, designed and realised entirely by BBM, based on the customer's specific needs.

In conclusion, thanks to our line, free cans are packaged in multi-flavor packages. The so-made package is then inserted in multi-layer boxes by means of the handler.
