

FONTI CORALBA

Just as new: complete overhaul
of filling monoblock

CUSTOMER NEED:

A new filling machine, able to adapt to four formats
several glass bottle and two nominal capacities (10,000 and 12,000 bph)

BBM SOLUTION:

After a careful analysis of market and production needs, BBM proposed a used filler, completely overhauled and guaranteed by BBM technicians, model Blue Star model 2000. Blue Star is a filling monoblock, consisting of filler, rinser and capper; an electronic upgrade was performed on the machine - PLC modification from S5 to S7 -, while the capper was made able to work with two types of caps (aluminum and plastic). This was achieved by recovering parts from the existing capper. For a matter of hygiene and safety, the machine was equipped with an air-insulation system, or a pressure system to keep dust and other infiltrations away from the line.

BBM took care of the dismantling of the previous machine, the transport of the new filler to the customer's site, installation, and testing.
