

# Royal Unibrew – Terme di Crodo

Supply and testing of packaging machine for LemonSoda line

## CUSTOMER NEED:

The installation of a LemonSoda packaging line, including a shrinkwrapper machine and conveyors to complete. The goal? Create an efficient and flexible line, capable of packaging bottles in four different formats

## BBM SOLUTION:

BBM supplied a shrinkwrapper machine and input and output belts for the production of four different formats of LemonSoda bottles.

- 1250 ml bottle, in 3x2 pack
- 1000ml bottle in 3x2 pack
- 330 ml bottle in 4x3 pack
- 250 ml bottle in 2x2 pack with double track

The work included the dismantling and removal of an old packaging machine, later replaced by a shrinkwrapper completely overhauled by BBM with commercial electronics and adapted to the layout of the existing conveyors, thanks to the careful study of the engineering department.

Following this supply, a second packaging machine for 250ml bottles was installed. After integrating the machine with the conveyors for feeding, BBM technicians connected it to the existing plant and concluded the tests. We thank Terme di Crodo Srl for the collaboration.
