

# Conservative dismantling for Acqua Vera

Dismantling in record time of 27 bottling machines

## CUSTOMER NEED:

The plant of Santo Stefano Quisquina, in the Agrigento area, is spread over an operational area of about 20,000 sm; BBM Service has been chosen as a partner in the improvement of the unit, aimed at bringing the plant even closer to the "smart factory" philosophy. In June 2022, Acqua Vera needed to free up the water packaging department for the installation of a new, modern and higher-performance line.

## BBM SOLUTION:

Thanks to the consolidated experience in carrying out conservative dismantling – one of which in collaboration with Nestlé Waters –, **Acqua Vera has confirmed its choice of BBM**, for a conservative dismantling of the entire blowing, labeling, packaging, and palletizing area. The 27 machines have been photographed, numbered and catalogued. BBM built wooden crates to transport machinery and moved sixteen machines at the Castrocielo plant in Lazio. The rest were either disposed of or shipped to BBM for review and resold. The impressive operation involved 5 exceptional trailers, 15 standard trailers, and 10 wooden crates. **In just 10 days**, BBM carried out the cataloguing and dismantling of the line in compliance with safety regulations, as expected. **The dismantling was carried out following a strict team organization.**
