

Glass Line relocation and start-up for Fonti di Posina

Dismantling, relocation and start-up of the glass bottling line in just three weeks.

CUSTOMER NEED:

The conservative relocation of a part of the glass bottling line, in order to differentiate the packaging of bottles in crates and cartons, the latter aimed at export abroad

BBM SOLUTION:

BBM took care of the creation of a bypass for packaging in crates, through the modification of single-line transport and the relocation of the palletizer, stretch-wrapper, and depalletizer.

The operating logic of the line has also been restored with the inclusion of an autonomous stop system. During the relocation, partial maintenance of the equipment was carried out, the worn components of which were replaced with new parts. **In just three weeks, the dismantling, relocation, assembly, and start-up of the line was completed. The result is a 20-30% more efficient line, capable of producing 10,000 bottles per hour in four formats.**
