

# Supply and installation of used bottling line in record time

Supply and installation of line in record time for Fonti di Posina Spa

## CUSTOMER NEED:

The purchase of a new PET bottling line. The difficulty of the project lay in the delivery time: customer needed to start production within a few weeks.

## BBM SOLUTION:

BBM offered the customer a complete PET line of 12,000 bottles per hour, which he already had in-store and was ready for installation and start-up at the customer's site. The exclusive CE-certified line for PET bottles was the compact and ideal solution for bottling still and sparkling water in three different formats: 500, 1000 and 1500 ml.

BBM Service's technical department has redesigned the layout of the line to fit the surface of the customer's plant – 800 square meters. In just three months from the request, BBM Service's specialized technicians relocated, installed and started up the complete line, from blowing to palletizing.
