

Packaging line and used-reconditioned belts for Maniva

Supply and installation of Smipack BP for new packaging format

CUSTOMER NEED:

Without upsetting the layout of the existing line, insert a new packaging format, aimed at overpacking 500 ml packs in 3x2 in practical units of 4 packs, for a total of 24 bottles.

BBM SOLUTION:

BBM Service's technical department designed a layout aimed at optimizing existing spaces without compromising the fluidity of the production line. The new packaging machine picks up the packs from the existing shrink wrapper, packs them, and directs them to the palletizer. In just five days, BBM Service installed and started up the Smipack BP packaging machine, complete with all used-overhauled belts at the inlet and outlet.

The decision to opt for used and reconditioned conveyors brings with it numerous advantages; in addition to significantly reducing initial costs, Maniva has actively contributed to environmental sustainability, minimizing ecological impact and promoting the circular economy. An approach that not only guaranteed a quick return on investment but also increased the reliability of the equipment and reduced waiting times for installation and start-up. Maniva was therefore able to continue to operate efficiently and continuously.
