

Used-overhauled belts for beverage bottling line

Supply and installation of used/revised end-of-line belts

CUSTOMER NEED:

Relocation of end-of-line and supply of new conveyor belts for adaptation to new layout

BBM SOLUTION:

BBM handled the relocation and start-up of the stretch wrapping machine, as well as supplying the used-revamped conveyor belts for the packages destined for the end of the line, totalling about 30 metres. In addition, BBM carried out the conservative dismantling and disposal of some machinery. Thanks to the synergetic collaboration with BBM Service, the complete project, including feasibility analysis, conservative relocation of the machinery, and the start-up installation of the conveyor belts, was completed in just three weeks. This approach ensured a complete and integrated service, supporting Crodo's continued growth in the beverage market.
