

# Les Huileries du Souss Belhassan

**Conversion of a KRONES Contiform blow moulding machine from water to oil processing**

## **CUSTOMER NEED:**

Les Huileries du Souss Belhassan (HSB), a Moroccan company specialising in the production of vegetable oils, needed a blow moulding machine suitable for bottling oil, in two formats (500 ml and 1000 ml), for a new production line. They were looking for a reliable, sustainable and cost-effective solution.

## **BBM SOLUTION:**

BBM proposed a used KRONES Contiform 316, originally designed for water, which has been completely overhauled and converted for oil. Technical changes have been made, such as the customization of the bottle neck (from Alaska thread to PCO 29/21), the integration of the required options and the adaptation to the customer's layout. The machine was installed and started up in just six months, ensuring high performance (24,000 bph), fast format changes, cost savings and complete after-sales support.
