

BBM renews the LSK 45F shrink wrapper for Coca-Cola Sarajevo: more flexibility and reliability in line

Coca-Cola Sarajevo needed a more flexible and reliable shrink wrapper for different PET and glass formats. BBM supplied a fully upgraded LSK 45F with reinforced electronics, fuel system and components, ensuring stable and long-lasting performance.

CUSTOMER NEED:

Coca-Cola Sarajevo needed a reliable and flexible shrink wrapper, capable of handling different formats of PET and glass bottles, improving process stability and feeding accuracy.

BBM SOLUTION: BBM proposed an LSK 45F SMI shrinkwrapper completely overhauled and updated according to its standards, transforming it into a high-performance, reliable and customized machine. Changes included: the integration of BBM commercial electronics, for easier management and greater availability of spare parts; the installation of the scalar feeding module, which improves efficiency in orienting bottles, even irregularly shaped; the adoption of a steel chain in the shrink tunnel, for greater wear resistance; a timed pneumatic system, for precise regulation of the product flow in line with the production speed. The machine, capable of handling eight different format combinations, was tested in the BBM showroom, installed on site by a specialized technician and put into operation on schedule.
